

## **HOW DO WE USE EVIDENCE TO CREATE CONSENSUS?**

Keith Cutting

*BCUC, Chalfont St. Giles, United Kingdom*

A pragmatic approach to the achievement of consensus in wound care is required.

This implies that a far reaching agreement involving wound care management decision is difficult to achieve. Even if harmony in decision making is demonstrated evidence of individual non-conformance will be found.

This presentation explores evidence, consensus and why lip service is often paid to evidence and the difficulty in implementing best practice guidelines.
